

ISO doorleaf and colour range

A sectional garage door with panel styles

Sectional garage doors made of ISO panels are available in seven different external panel styles. The panel skin on the inside of the door is painted to RAL 9002. The panels are available in heights of 488 mm or 610 mm. Any door opening height can be catered for as the door leaf is built up using a combination of both panel heights and finished with an appropriate top profile.

The top panel does not have to be cut to size. This improves the stability and strength of the top panel.

Harmonious colours to match your home

Our sectional garage doors are available in a wide range of colours that can be chosen to match the colour scheme of your home. ALPHA has standardised on one or more colours for each type of door leaf. However, the door leaf can be ordered in a different colour if required. Customers can choose from an extensive range of RAL colours. Dark colours are to be avoided as exposure to sunlight can lead to panel deformation and deterioration of the foam core. The paint is applied to the panel in liquid form using a spray technique and provides extra protection for the sectional garage door.

Colour shades

The way a colour is perceived after application to the panel is dependent on the substrate and the way in which the paint layers have been applied. It is also possible to supply the panels in special colours, even if these colours have been specified using a non-standard colour system. When colour samples are supplied, the colour is approximated as closely as possible within the RAL colour system.
